

 **PROMESCENT[®]**
MAKE LOVE LONGER[®]

Last Up To **64%**
LONGER IN BED!*

Helps men delay ejaculation
for more sexual satisfaction.

Store at 20-25 °C (68-77°F)

Promescent is a topical, desensitizing medication that is applied directly to small, targeted areas of the penis, providing ejaculation control while maintaining sexual sensation.

It works by delaying the orgasm through postponing ejaculation, so sex can last longer. It gives men greater control without loss of feeling, so couples have more time and freedom to experiment in bed.

CLINICALLY PROVEN

“Our findings support that Promescent is effective in improving the quality of sexual experiences and increasing the frequency of both members of the couple experiencing orgasm, both of which are crucial in helping couples feel more satisfied with their sex lives.”

- **Kristen Mark, PhD, MPH**
University of Kentucky

The International Journal of Impotence Research has released a study reporting that Promescent, an FDA-compliant topical spray, helps men last significantly longer before orgasm, leading to enhanced quality of sexual experience and a greater chance of both partners orgasming.

The study, which was authored by leading industry experts Dr. Kristen Mark, a noted sex and relationships researcher at the University of Kentucky, and Dr. Ian Kerner, a nationally recognized sexuality counselor and bestselling author of *She Comes First*, found that participants' average time from penetration to ejaculation was 11.16 minutes during sexual events when Promescent was used and 6.81 minutes when it was not used, **representing a 64% increase.**

Mark, K. P.; Kerner, I. (2016-11-01). "Event-level impact of Promescent on quality of sexual experience in men with subjective premature ejaculation". *International Journal of Impotence Research*.
